F-SERIES WHEEL LOADERS

EXPERTS FOR THE REAL WORLD SINCE 1842

- 1842** Case is founded.
- 1869** The first Case portable steam engine - road construction is born!
- 1958** The first Case 4-WD wheel loader, the W9, is introduced.
- 1969** Case begins skid steer loader production.
- 1998** Ride control on loader backhoes and skid steer loaders: another Case first. From 1998 Case Wheel Loaders run FPT engines, leaders in industrial engine technology.
- 2001** The exclusive mid-mounted Cooling Cube in Case wheel loaders means clean engine, reliability and massive bucket payloads.

HERITAGE

A TRADITION OF INDUSTRY FIRSTS

- 2011** *The first wheel loaders with SCR engine technology and Proshift transmission lead to faster cycles and fuel economy.*
- 2012** *Case completes its Tier 4i (EU Stage IIIB) wheel loader range: once again, the first in the industry.*
- 2015** *Case wheel loaders achieve Tier 4 Final / EU Stage IV emissions standards.*

F-SERIES WHEEL LOADERS

HIGH EFFICIENCY with no EGR or particulate filter

The engine was developed and manufactured by our award winning sister company FPT Industrial, which produces over 500,000 engines per year and powers world record winners.

The in-house design leverages advanced technologies developed for commercial vehicles and agriculture, and introduces specific tailored solutions for off-road applications.

The NEF N67, with 6 in-line cylinders and a 6.7 litre displacement, is designed to offer both fuel efficiency and reliability with plenty of power available.

- The air intake flow is increased by a turbocharger with air-to-air cooling.
- The multiple injection delivers best-in-class high torque performance at low rpms.
- No EGR valve is used: 100% fresh air is taken for combustion without DPF and no extra cooling system is needed.

Our engine technology is so reliable that it is trusted by the French Sea Rescue service for their boats:
what better guarantee could you wish for?

ENGINE KEEP IT SIMPLE

LOW EMISSIONS without particulate filter

With HI-eSCR after-treatment, FPT technology meets EU Stage IV (Tier 4 final) emissions standards, a big step towards cleaner air. With this system, fewer components are involved, engine oil quality is not compromised and there is no need for a particulate filter (DPF) or

additional cooling. This allows for a very compact engine compartment, resulting in excellent rear visibility. In addition, the maximum temperature reached by HI-eSCR is 500°C, 200°C below the maximum temperature of a particulate filter.

HI-eSCR

1996: EU Stage I
US Tier 1

2011: EU Stage IIIB
US Tier 4 interim

2015: EU Stage IV
US Tier 4 final

It would take six months for a Tier 4 Final wheel loader with HI-eSCR technology to produce the particulate and NOx emissions that a Tier 1 wheel loader would produce in one day.

F-SERIES WHEEL LOADERS

HIGH EFFICIENCY

ProShift transmission

ProShift transmission provides on average 1,5 litre/hour fuel saving and up to 20% faster cycle time. This is the result of three premium features:

1. 5-speed transmission

The 5 speeds allow to always work at lower rev's compared to 4-speed transmission. Lower rev's result in lower fuel usage.

When the ECO mode is selected not only the engine gives priority to fuel efficiency but also the transmission shifts at lower rev's in order to increase fuel efficiency and noise emission.

2. Torque Converter Lock-up

Wheel loaders continuously shift gears and every time diesel saving is achieved with:

- Torque converter lock-up that kills viscous losses from 2nd up to 5th gear
- Engine de-rating during gear shifts that kills torque peaks in the clutch and contributes to lower fuel usage

PROSHIFT TRANSMISSION

GO FASTER, STAY EFFICIENT

EASY TO USE

Intelligent clutch cut off with power inch

3. Power inch

With Power Inch, positioning the loader is as smooth as with a hydrostatic transmission, with the added advantage of massive pushing power delivered by the torque converter. This also prevents rolling back on slopes.

F-SERIES WHEEL LOADERS

- Multiple sintered bronze brake discs are cooled in an oil bath.
- Metal face seals are more resistant to water, fine debris and low temperatures.

HIGH RELIABILITY

Case heavy-duty axles

The heavy-duty axles are tougher, bigger and easier to service thanks to the 3-piece housing design. Wet multiple disc brakes, made of resistant sintered bronze, are located in each wheel hub. Our heavy-duty axles are engineered to support L5 or solid tyres for very abrasive environments. Solid tyres can be factory fitted.

A higher value results from:

- 20-30% lower tyre wear because of no slippage between the wheels;
- reduced fuel consumption because there is no friction in the differential
- reduced downtime for maintenance because of fewer moving components with open differentials.

AXLES AND DIFFERENTIALS

WHEN EFFICIENCY MEETS PRODUCTIVITY

COST SAVINGS

100% auto lock differential

With open differentials, no friction is applied to reduce wheel slip. As a result, there is less tyre wear and lower energy losses.

With the 100% Auto-lock, 100% of the available torque is transmitted to the wheels to provide maximum tractive effort.

Taking a curve on solid ground		Loading on soft ground	
With limited slip differential:  <p>Automatic slip limited engagement</p> <ul style="list-style-type: none"> - Internal losses and wind up - Increased tyre wear 	With 100% diff lock (optional):  <p>No engagement (open diff)</p> <ul style="list-style-type: none"> - No energy loss - Less tyre wear 	With limited slip differential:  <ul style="list-style-type: none"> - 70% tractive effort transmitted to the wheels - automatic engagement 	With 100% diff lock (optional):  <ul style="list-style-type: none"> - 100% tractive effort transmitted to the wheels - automatic or manual engagement

F-SERIES WHEEL LOADERS

HIGH RELIABILITY

Case cooling cube

The unique design of the CASE cooling cube, with five radiators mounted to form a cube instead of overlapping, ensures a constant flow of fresh and clean air from the sides and from the top, to maintain constant fluid temperatures.

The cube structure provides easy access to radiators for a more effective cleaning and serviceability: additional cleaning can also be easily done manually, with separate access to each radiator.

HIGH PAYLOAD

Better weight distribution with the rear mounted engine

CASE COOLING CUBE THE ANTI-CLOGGING SOLUTION

SUPERIOR COOLING EFFECTIVENESS

Heavy-duty cooling

Handling fertilizer, cereals, animal feed or other materials indoors usually leads to radiator clogging. Case's solution is the Heavy-duty Cooling option, which features:

- Extra thin inlet grille that stops bigger particles
- Sealed radiator covers that ensure the cooling air is 100% filtered
- Wide core radiators increase self cleaning with the reversible fan and prevent clogging.

Available on 721F Waste Handler model and customisable on other models.

HEAVY-DUTY GRILLE OUTSIDE

Heavy-Duty

Standard

HEAVY-DUTY COOLERS INSIDE

Heavy-Duty

Standard

Designed for dusty environment

The cooling system is mounted behind the cab, far from the rear bumper of the machine and from the ground: away from the dust.

MAIN REASONS TO CHOOSE THE F-SERIES

FAST CYCLES

ProShift transmission option reduces cycle times significantly thanks to the torque converter lock-up and the 5 speeds available.

HIGH EFFICIENCY

Don't be surprised to see your fuel usage dramatically lower by, from 2 to 7 liters per hour, compared to other technologies.

With Hi-eSCR and the Proshift option you will avoid significant energy losses and costs.

HIGH RELIABILITY

- Heavy-duty axles
- 100% differential lock
- Unique cooling package

SAFE AND EASY MAINTENANCE

The rear mounted engine below the electric easy-to-open hood is accessible at ground level. Grouped drains rationalise maintenance operations.

COMFORTABLE AND SAFE CAB

- ROPS/FOPS level 2
- Pressurised cab
- Wider glazed area for unbeatable visibility
- Spacious cab

SUPERIOR COOLING EFFICIENCY

- Five radiators form a cube instead of overlapping.
- Designed to maintain constant fluid temperatures.

SAFE WITH FLAMMABLE MATERIALS

The exhaust's maximum temperature is 50% lower without DPF. AdBlue sprayed directly in the exhaust works as a sparks arrester while reducing NOx levels.

LOW EMISSIONS

We keep it simple! Hi-eSCR, our EU Stage IV (Tier 4 final) compliant technology does not require an EGR valve or a particulate filter. You just need to add AdBlue once every 4 diesel refill.

F-SERIES WHEEL LOADERS

COMFORTABLE AND SAFE CAB

Wider and well protected cab

- Our reinforced cab guarantees protection against roll over (ROPS) and falling objects (FOPS).
- Our cab is also certified P2 level according to European Standards EN143, which means that 94% of airborne particles are filtered. When working in particularly tough conditions, additional pressurisation and particle filtration can be fitted.
- On Waste Handler models windshield guards, provide protection from falling pieces of solid waste.
- The CASE Cab is 2.06 m³ and 1.64 m wide: it is the widest cab in the industry
- The air suspended seat features a high back design and lumbar adjustment, a saving grace during long working days. It includes seat heaters which warm up cold winter mornings.

CAB COMFORT RULES

HIGH VISIBILITY

Wide glazed surfaces
and curved engine hood

You'll feel more confident and work faster with the great all-round visibility provided by the very low shape of the curved rear hood and the ample glazed surfaces.

COMFORTABLE AND SAFE CAB

Low engine vibrations

- The rear mounted engine is far from the cab, further enhancing operator comfort.
- Engine noise and vibrations are reduced by the 3-step injection: pre-, main- and post-injection.

F-SERIES

WHEEL LOADERS

Bottom guards (front and rear)

721F ADDITIONAL OPTIONS

HEAVY DUTY PROTECTION

HIGH RELIABILITY

A full range of protecting guards

To make your wheel loaders last longer in the toughest conditions, Case offers a full package of 16 guards that you can select depending on the mission of each of your machines (on request on other models). Less maintenance, more uptime.

SAFE WITH FLAMMABLE MATERIALS

With Hi-eSCR system

Handling wood, green waste and other flammable materials can be dangerous, especially outdoors. AdBlue sprayed directly in diesel exhaust reduces fire ignition risks. In addition, the maximum temperature of HI-eSCR is 500°C, 200°C less than the maximum temperature of a particulate filter.

F-SERIES WHEEL LOADERS

The layout of the components under the hood is optimised and results in easier maintenance.

Hood opening and battery on/off switches. In case of flat battery, hood can be opened externally with Remote jump start

Grouped drains for clean and quick oil changes

SAFE AND EASY MAINTENANCE

Ground level serviceability

- One-piece electric hood

The positioning of the engine at the rear and the easy-to-open electric hood provide fast access to the service points. Jumper cables are available as standard for jump starting the engine if the battery is low.

- Grouped service points

Don't be surprised if you don't see any safety handrails around the hood or steps behind the rear wheels, all service points are easily accessible at ground level. You can do a fast visual check of the hydraulic and transmission oil levels. The three drains are grouped together on the left side, so that fluids are easy and quick to replace.

- Greater safety

All the main service points are easily accessible from the ground, so you can carry out your daily maintenance safely and efficiently.

MAINTENANCE AND TELEMATICS

FAST AND EASY

THE SCIENCE BIT

The Case SiteWatch telematics system uses a high-tech control unit mounted on each machine to collate information from that machine and from GPS satellites. This data is then sent wirelessly through the mobile communication networks to the Case Telematics Web Portal.

SiteWatch: centralised fleet control benefits at your fingertips

Measure your true asset availability and optimise it

- Eliminate the “phantom fleet”: SiteWatch allows to identify spare units or under loaded machines on each site.
- Become able to reallocate units where they are more needed.
- Forward Maintenance Planning is easier since the actualised working hours are always available.
- Extend the benefits of SiteWatch to the rest of your fleet: SiteWatch can be installed on the units of other brands as well.

Challenge your Total Cost of Ownership!

- Being able to compare the fuel usage of different machine types will allow you choose the right equipment.
- Save on transport costs with planned and grouped maintenance tasks.
- Peace of mind, optimised uptime and lower repair costs: with preventive maintenance you can for example be alerted if the engine needs to be serviced and avoid a disruptive breakdown.
- Be able to compare your asset Return On Investment on different sites.
- Your equipment is used only during working hours. You can set up alerts so that you know if it is in use during the weekend or at night.
- Integrate with the programmed maintenance package, so that you can be sure every machine is at the right place at the right time.

More Safety, Lower Insurance Premium

- Keep thieves away: dissuade them from attacking your asset because it is geo-localised. SiteWatch is hidden so that thieves can't find it quickly.
- Your fleet is used only where you decide. You can define a virtual fence and receive an email when a machine exits that perimeter.
